

Hrishikesh Baidya

6+ years of experience | hrishikeshbaidya7@gmail.com | +918442979928 | <https://hrishikeshbaidya.in>

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, Express.js, React, Next, Vue

AI & Data: Generative AI, RAG Pipelines, Multi-Agent LLMs, Vector Databases (MongoDB Atlas), PostgreSQL

Architecture & Infrastructure: Event-Driven Architecture, AWS EC2, Docker, CI/CD, Temporal.io, BullMQ

UI & Tooling: MUI, Tailwind, Figma (Viewport-proportional design), Jest, Redux

EXPERIENCE

SSE at [Lingocare](#) • Feb. 2026 – present • Remote - Frankfurt, Germany

- Engineered a multi-agent Retrieval-Augmented Generation (**RAG**) pipeline to automate medical content creation, reducing generation time by 90% while maintaining strict GDPR and curriculum compliance. .
- Architected a high-throughput, asynchronous data ingestion engine utilizing Node.js, **BullMQ**, and MongoDB Atlas Vector Search to securely process and classify heavy nursing texts.
- Managed robust cloud infrastructure and deployment lifecycles, utilizing **AWS** EC2, **Docker** containerization, and automated **CI/CD pipelines** to ensure high availability and seamless scalable operations.
- Developed a responsive 3-layer retrieval workbench utilizing Next.js, React, and MUI, implementing **fluid, viewport-proportional layouts** that empower educators to instantly generate contextually accurate clinical assessments.

SDE II at [Vizmo](#) • Apr. 2022 – Feb, 2026 • Remote - Bangalore, IN

- Architected a highly scalable, event-driven room booking system via Temporal.io **workflows**, processing 10K+ daily bookings and reducing manual operational intervention by 85%.
- Built a sophisticated canvas-based floor visualization engine using **Konva.js**, rendering **1000+ interactive spatial elements** with real-time resource synchronization and **coordinate transformations**.
- Designed a dynamic **multi-tenant** digital registry and form builder with Casbin **RBAC**, serving 500+ enterprise locations with strict **Zod** schema validation and configurable compliance workflows..

PERSONAL PROJECT

Talkdrill: Learning app powered by openAI

- Launched and scaled an AI-powered language learning application, building the complete infrastructure with Node.js, Express, MongoDB, and React Native for active real-world users.
- Integrated OpenAI to drive intelligent conversational agents, engineering complex real-time communication features including seamless video calls, live chat, and event-driven push notifications.
